Recommendation

PROCEED TO DETAILED UNDERWRITING.

Marketplace at Altamonte clears the initial screening threshold at a stabilized yield on cost of 5.87%, representing a meaningful spread to the going-in cap rate of 5.25% and providing a credible basis for further diligence. The site's 80-unit-per-acre mixed-use entitlement across 24 acres in an infill Orlando submarket is a genuinely differentiated land position — comparable entitled sites at this scale do not exist in the immediate trade area, and Phase 1's low-rise program at 384 units consumes only a fraction of the allowable density, preserving substantial future optionality. Two directly comparable Class A properties — Aston at Uptown and CenterPointe — delivered within 0.5 miles in 2024–25 and are actively leasing, providing strong demand validation for the underwritten rent assumptions. Proceed to full diligence, subject to GC cost confirmation at \$250/SF and land price correction to the \$7M–\$13.5M market-supported range.

Hard Cost Sensitivity		\$230 /PSF	\$240 /PSF	\$250 /PSF	\$260 /PSF	\$270 /PSF
LIRR		17.66%	20.04%	20.04%	17.66%	13.24%

Deal Strengths

Strength 1	Positive spread on day one. 5.87% YOC above the 5.25% going-in cap rate — value is created at delivery, not dependent on exit.
Strength 2	Irreplaceable entitlement position. 80 units/acre across 24 infill acres in Uptown Altamonte; no comparable entitled site exists in the immediate trade area.
Strength 3	Demand validated by live comps. Aston at Uptown and CenterPointe — both Class A, delivered within 0.5 miles in 2024–25 — are leasing at or above low-rise cost efficiency. \$250/SF positions Phase 1 well below mid-rise comp construction costs, improving margin and reducing downside sensitivity.
Strength 4	Future density optionality. Phase 1 uses only 16 units/acre of an 80-unit/acre entitlement — the remaining site carries significant unrealized value independent of Phase 1 returns.
Strength 5	

Deal Risks

Risk 1	Unvalidated construction cost. \$250/SF is the critical open assumption — tariff and labor escalation in 2025–26 make GC confirmation the highest-priority gating item before capital commitment.
Risk 2	Land price not yet market-anchored. Acquisition cost must be confirmed at the \$7M–\$13.5M market-supported range; any material overpayment directly compresses YOC and equity returns.
Risk 3	Negative leverage persists. At 5.87% YOC against 6.89% construction debt, the project still carries negative leverage — equity returns remain partly exit-driven.
Risk 4	Orlando supply pipeline. 11,000+ units remain under construction; slower-than-modeled lease-up at 25 units/month extends construction loan exposure and increases construction risk through 2027–28.
Risk 5	Retail co-tenancy complexity. Developing within an active retail center introduces phasing, access, and lease clause risk — demolition and relocation exposure has not yet been priced into the model.

Investment Thesis

Marketplace at Altamonte represents an opportunity to develop 384 Class A multifamily units on a uniquely entitled 24-acre infill site in Altamonte Springs, a high-growth Seminole County submarket with demonstrably strong renter demand and a tapering new supply pipeline. At a stabilized yield on cost of 5.87% — a positive spread to the 5.25% going-in cap rate — Phase 1 generates immediate value creation from day one without relying on aggressive exit assumptions to justify the equity deployment. The low-rise program at \$250/SF positions the project competitively on a cost basis relative to recently delivered mid-rise comps in the submarket, and the 80-unit/acre entitlement across the remaining site provides a durable source of long-term land value independent of Phase 1 performance. The 12% LIRR hurdle is achievable under a base-case scenario of 2.5% annual rent growth and modest cap rate compression through a 5-year hold, with the promote structure appropriately aligned to LP return expectations for a suburban Florida new construction deal. The thesis rests on two assumptions: GC validation of the \$250/SF hard cost basis, and land acquisition at or near the market-supported range — either deviating materially would compress the YOC below the level needed to clear the equity hurdle on a standalone basis.

Next Steps & Diligence Items

- GC cost quote — obtain hard cost bid from a Florida low-risespecialist; \$250/SF must be confirmed before any further capital or time is committed.
- Land price negotiation — re-anchor acquisition to the \$7M–\$13.5M market-supported range and stress-test YOC sensitivity at the high end.
- Retail lease audit — review all existing tenant leases for co-tenancy, demolition, and relocation clauses before site plan is finalized.
- Lender pre-screen — present the updated capital stack to prospective construction lenders; confirm DSCR coverage and LTC appetite at 5.87% YOC.
- Third-party rent study — commission market appraisal of achievable rents at 2027 delivery; stress-test at ~10% to confirm 12% LIRR remains intact.
- Architect site plan — finalize low-rise footprint, Phase 1 boundary, parking layout, and GBA within the 24-acre site.
- Full due diligence authorization — upon GC confirmation and land price alignment, issue LOI and proceed to Phase I ESA, survey, title, and zoning confirmation.
