

2026 National Market Strategy & Selection

United States

Identifying Long-Term Multifamily Opportunities Across the United States

Report Prepared For:

05.22.2026

Version 1

Contents

- 01** **Executive Summary**
Topline rankings, key takeaways, and recommended markets for LV Collective's expansion.
- 02** **Methodology**
Markets evaluated, z-score framework, category weights, and data sources.
- 03** **Priority Market Analysis**
Full market rankings, Monte Carlo simulation, and strategy positioning.
- 04** **Market Narratives**
Deep-dive analysis on priority markets including drivers, risks, and strategic outlook.
- 05** **Recommended Path Forward**
Five-stage roadmap from market selection through underwriting and execution.
- 06** **Appendix**
Category-level rankings, weight rationale, and metric detail.

01

Executive Summary

04 Overall Market Rankings Table

Composite z-score rankings across 85 MSAs, scored across 7 weighted categories.

06 Tier 1 Priority Markets Map

Geographic distribution of Tier 1 priority markets across the United States.

07 LV Collective Strategic Context

How Stonewater rankings and target expansion markets align with LV Collective's platform.

2026 National Market Strategy & Selection

OBJECTIVES

The objective of this deliverable is to identify the U.S. multifamily markets that best align with LV Collective’s long-term development, acquisitions, and expansion strategy. Using a data-driven ranking framework, the analysis evaluates where demographic growth, economic strength, supply conditions, and development feasibility create the strongest risk-adjusted opportunities for capital deployment. The goal is to provide a strategic framework that helps LV Collective focus resources on the highest-conviction opportunities.

STONEWATER PROCESS

This analysis evaluates 85+ U.S. metros for ground-up multifamily development/acquisitions opportunity. Markets are scored and ranked across 100+ individual metrics. Category weights are set to reflect their relative importance to development outcomes. The output is a composite z-score for each market that identifies opportunities and markets for capital allocation.

STONEWATER x LV COLLECTIVE RECOMMENDATION

- Austin
- Jacksonville
- Charleston
- Raleigh
- Orlando

STONEWATER x LV COLLECTIVE NEXT STEP

Align on which markets match LV Collective's conventional multifamily expansion objectives and acquisitions pipeline - and to scope the submarket-level work that turns this national view into actionable site-level intelligence.

Overall Market Rankings

13 Markets Cleared the Tier 1 Threshold Across 85 Markets Evaluated. See Section 03 for Detailed Rankings.

TIER 1 - PRIORITY MARKETS			Z-SCORE
1	Boise City, ID		0.98
2	Austin-Round Rock, TX		0.87
3	Lakeland-Winter Haven, FL		0.85
4	Charleston-North Charleston, SC		0.66
5	College Station-Bryan, TX		0.64
6	Jacksonville, FL		0.59
7	Orlando-Kissimmee-Sanford, FL		0.58
8	Raleigh, NC		0.56
9	Reno, NV		0.56
10	Nashville-Davidson--Murfreesboro--Franklin, TN		0.45
11	Dallas-Plano-Irving, TX		0.43
12	Greenville, SC		0.42
13	Salt Lake City, UT		0.41

A z-score measures how a market performs relative to the group average - positive scores indicate above-average performance, and the further from zero, the stronger the market relative to its peers.

Showing top 13 of markets evaluated. Full rankings and category-level detail on following pages. Scores based on z-score normalization. Q1 2026.

KEY TAKEAWAY

Thirteen markets cleared the Tier 1 threshold, led by Boise (0.98), Austin (0.87), and Lakeland (0.85). A meaningful gap separates the top cluster from the Tier 2 field - Tier 1 markets average a composite score of 0.61 versus 0.24 for Tier 2. For LV Collective, Austin's #2 overall ranking validates its existing platform, while Jacksonville, Charleston, and Raleigh represent the strongest structural cases for new market entry.

SCORE DISTRIBUTION

Top Score	0.98
Tier 1 Avg. Score	0.61
Tier 2 Avg. Score	0.24

MARKET STRUCTURE

Markets Evaluated		85
TIER 1	Priority Market	13
TIER 2	Selective Pursuit	21
TIER 3	Lower Priority	51

Tier 1 Priority Markets

13 Markets Cleared the Tier 1 Threshold Across 85 Markets Evaluated. See Section 03 for Detailed Rankings.

What the Rankings Say

13 MARKETS CLEARED THE TIER 1 THRESHOLD - THREE PATTERNS DEFINE THE FIELD

Sunbelt Markets Rank Highly

Sunbelt growth markets are still going strong, but timing matters. The top-ranked markets like Boise, Austin, Jacksonville, Lakeland, and Charleston have a lot in common: strong in-migration, above-average household formation, and economic fundamentals that support long-term renter demand. Most also carry near-term supply challenges as elevated pipelines from the 2022-2024 development boom digest. The window between peak deliveries and restabilization is where developers can create basis advantages.

Austin is a Core Market

Austin is an essential market, with a lot going for it. Austin's #2 overall ranking is driven by the strongest economic performance of all 85 markets evaluated. Near-term supply risk is real (#71 in the supply category) and should inform underwriting assumptions and deal timing. But the structural case - tech-driven job growth, high-income household formation, sustained in-migration - remains among the best in the country.

Expansion Markets Break Into Two Risk Profiles

When looking at expansion markets, we can really break them down into two main categories. Jacksonville and Charleston stand out as the best options for immediate investment potential. They have a solid balance between supply and demand, favorable feasibility, and steady demand fundamentals. Raleigh and Orlando offer higher long-term upside with more near-term absorption risk, rewarding developers who can time entry around the supply peak.

LV Collective Strategic Recommendations

BASED ON CURRENT MARKET CONDITIONS AND LV COLLECTIVE'S EXPANSION OBJECTIVES

AUSTIN

Core Market

Austin's economic engine is best-in-class, and LV's existing platform - with Paseo delivering and The Right Angle underway - is already well-positioned in the market. The near-term priority is identifying the next advantaged site while phasing delivery to avoid peak supply competition. Underwrite conservative lease-up and carry, and target submarkets with limited direct pipeline exposure.

JACKSONVILLE

Near-Term Expansion

Broad-based growth, improving supply balance, and strong feasibility make Jacksonville the most immediately actionable expansion market. #6 overall, #4 in development feasibility. Positioned for near-term site sourcing and underwriting.

CHARLESTON

Near-Term Expansion

#4 overall, #2 in development feasibility. Steadier demand, limited pipeline, and attractive cost conditions make Charleston the most defensible ground-up market in the analysis.

RALEIGH

Opportunistic - 12-24 Month Horizon

Raleigh's demographic and economic fundamentals are top tier. Current supply pressure is a timing issue, not a structural problem. Disciplined basis and entry timing in 2026-2027 position well for reacceleration by 2027-2028.

ORLANDO

Opportunistic - 24-48 Month Horizon

#7 overall, #2 in economic growth. Heavy near-term pipeline (#68 supply risk). Orlando's current oversupply environment is likely to create acquisition and land positioning opportunities for well-capitalized groups able to underwrite through short-term volatility.

LV Collective Capital Allocation Strategy

TARGET MARKETS

Austin-Round Rock, TX
Jacksonville, FL
Charleston-North Charleston, SC
Raleigh, NC
Orlando-Kissimmee-Sanford, FL

vs.

DEPRIORITIZED MARKETS

Miami-Miami Beach-Kendall, FL
Washington-Arlington, DC-MD-WV
Pittsburgh, PA
Cleveland-Elyria, OH
New Orleans-Metairie, LA

LV Collective focuses its investments in areas where there's a strong demographic shift, economic growth, and a balanced supply, all of which are driving demand for multifamily housing. The Tier 1 markets we've highlighted fit this profile exceptionally well.

DEVELOPMENT MARKETS

Jacksonville, FL
Charleston-North Charleston, SC
College Station, TX
Austin-Round Rock, TX
Raleigh, NC

vs.

ACQUISITIONS MARKETS

Orlando-Kissimmee-Sanford, FL

LV excels in ground-up development, focusing on markets where this expertise can thrive. Right now, Jacksonville and Charleston are prime opportunities for action. Austin and Raleigh are in the phase of identifying suitable sites, with plans to deliver by 2027, which should align well with the anticipated demand shift. Orlando can be seen as a development and/or acquisitions entry market - presenting near-term pricing dislocation, LV-specific platform advantages, and strong long-term demand fundamentals.

CONVENTIONAL MF MARKETS

Jacksonville, FL
Charleston-North Charleston, SC
Raleigh, NC
Orlando-Kissimmee-Sanford, FL
Austin-Round Rock, TX

vs.

STUDENT HOUSING MARKETS

College Station, TX
Raleigh, NC
Gainesville, FL
Nashville, TN
Salt Lake City, UT

LV operates two complementary product tracks. The conventional markets - Jacksonville, Charleston, Raleigh, and Orlando - are driven by broad-based household formation and employment growth that support stable lease-up without reliance on any single institution. The student housing markets leverage LV's Rambler platform in university-anchored demand pockets insulated from broader economic cycles. When both product types can thrive in the same metro area, LV holds a unique advantage that traditional developers can't match.

Jacksonville and Charleston are actionable now - feasibility supports near-term starts and both build on LV's presence in the Southeast. For Austin and Raleigh, site identification is the immediate priority, with delivery timed into the 2027-2029 tightening window. Orlando and Atlanta are near-term acquisitions entries with development optionality as the market evolves. Boston, on the other hand, is more of a long-term strategy – it makes sense to invest now while the market is a bit soft and hold on for a future recovery.

LV Collective Forward Outlook

FORWARD LOOKING OUTLOOK

Structural Depth Determines Who Recovers Fastest

Across the recommended markets, the fundamental cycle is consistent: migration and job growth drive outsized demand, development surges in response, a short window of rent and occupancy softness follows, the pipeline slows, and then the market readjusts and stabilizes. The markets ranked highest in this analysis are not immune to that cycle. They have a structural strength that helps them recover from these fluctuations better than other areas.

Pipeline Slowing, Markets Retightening

As pipeline deliveries slow and starts decline through 2026-2027, the recommended metros are positioned to retighten over a 12-24 month horizon. Markets with the strongest demand drivers - Austin, Raleigh, Orlando - will be at the forefront of this recovery. Markets with the best supply balance - Charleston, Jacksonville - should experience more stable conditions in the near term, with potential for growth as the market cycle begins to shift.

Market Selection Into Submarket Strategy

This report is the starting point, not the conclusion. The next step is translating market selection into submarket strategy - identifying where within each market the best risk-adjusted development opportunities exist at the site level.

02

Methodology

12 Market Selection Map

The 85+ MSAs included in this analysis, filtered by employment benchmarks, metro tranche.

13 Z-Score Framework

How z-score standardization enables cross-market comparison across 7 weighted categories.

14 Data Sources

Primary data providers underpinning this analysis. All data reflects Q1 2026 unless noted.

Market Selection

Among the 387 metropolitan statistical areas within the United States, this analysis focused on approximately 85+ carefully chosen target markets across the country. Each of the selected markets surpassed baseline non-farm employment benchmarks, and fell within the Gateway, Trading, and Frontier metro market tranches.

01	CA - 11 MSA's	06	CO - 4 MSA's
02	FL - 10 MSA's	07	SC - 3 MSA's
03	TX - 7 MSA's	08	WI - 3 MSA's

05	IN - 4 MSA's	10	TN - 3 MSA's

Z-Score Analysis

A Z-Score measures how a market performs relative to the group average. Positive scores indicate above-average performance; negative scores indicate below-average. The higher the score, the stronger the market.

PURPOSE OF Z-SCORE ANALYSIS

Ranking & Comparison: Useful in CRE market studies to rank MSAs across multiple metrics.	Standardization: It allows for comparison of data points from different datasets or with different scales.	Outlier Detection: High positive/negative Z-scores show unusual values (markets performing far above or below the average).	Risk/Return Profiling: Helps identify markets that are unusually “hot” (opportunity) or “weak” (risk) compared to peers.
---	---	--	---

If a Z-Score...

- 01 Has a value of 0, it is equal to the group mean.
- 02 Is positive, it is above the group mean.
- 03 Is negative, it is below the group mean.
- 04 Is equal to +1, it is 1 Standard Deviation above the mean.
- 05 Is equal to +2, it is 2 Standard Deviations above the mean.
- 06 Is equal to -1, it is 1 Standard Deviation below the mean.
- 07 Is equal to -2, it is 2 Standard Deviations below the mean.

Data Sources

All data reflects Q1 2026 unless otherwise noted.

03

Priority Market Analysis

16 Overall Market Rankings

Composite z-score rankings for the top 30 markets across all 7 weighted categories.

17 Monte Carlo Simulation Analysis

Ranking robustness analysis across 1,000 simulations with randomized category weights.

19 Base Case vs. Strategy Feasibility

Market positioning across ground-up development vs. differing investment strategies.

Overall Market Rankings

85 Markets Scored Across 7 Weighted Categories - Ranked by Composite Z-Score. See Appendix for Detailed Rankings.

RANK	MARKET	TIER	DEMOS	SUPPLY	RENT	OWNER		INCOMES	ECON	DEV	Z-SCORE

- Development Feasibility & Cost5.0%

INTERPRETATION

Scores based on z-score normalization across 85 USA MSAs. Higher score = more favorable relative positioning. Rankings updated Q1 2026.

Ranking Robustness: Monte Carlo Sensitivity Analysis

Ranking Robustness Analysis - 1,000 Simulations Across Randomized Weight Scenarios.

The Monte Carlo simulation randomizes category weights across 1,000 scenarios to test whether rankings hold under different analytical scenarios. Markets that rank highly across most simulations represent the highest-conviction opportunities.

Rank	Market	Top 5 Rank	Top 10 Rank	Top 25 Rank
1	Boise City, ID	21%	49%	78%
2	Austin-Round Rock, TX	13%	22%	38%
3	Lakeland-Winter Haven, FL	13%	25%	49%
4	Charleston-North Charleston, SC	0%	1%	35%
5	College Station-Bryan, TX	0%	1%	12%
6	Jacksonville, FL	2%	31%	66%
7	Orlando-Kissimmee-Sanford, FL	6%	27%	79%
8	Raleigh, NC	64%	99%	100%
9	Reno, NV	1%	14%	88%
10	Nashville-Davidson--Murfreesboro--Franklin, TN	3%	41%	99%
11	Dallas-Plano-Irving, TX	0%	2%	17%
12	Greenville, SC	0%	0%	9%
13	Salt Lake City, UT	0%	1%	65%

Two findings stand out: Raleigh shows near-perfect stability (97% top-10 probability) regardless of how the categories are weighted, while Charleston and College Station are more thesis-dependent - their rankings shift more when weight assumptions change.

Ranking Robustness: Monte Carlo Sensitivity Analysis

Ranking Robustness Analysis - 1,000 Simulations Across Randomized Weight Scenarios.

Raleigh and Nashville achieve 100% top-25 probability - under no weight scenario do these markets fall outside the top quarter of markets evaluated. Boise (78%), Orlando (79%), Reno (84%), and Jacksonville (67%) show strong top-25 stability. Markets below 20% here - San Antonio, College Station, Greenville - are the most sensitive to methodology assumptions and warrant additional scrutiny before capital commitment.

Base Case Feasibility vs. Acquisitions Focused Feasibility

This chart plots each market's performance on two key axes: base-case composite rank (x-axis) and value-add/opportunistic strategy rank (y-axis). Markets in the upper-right area rank highly on both - strong ground-up development opportunity regardless of strategy type. Austin and Orlando rank better on a value-add/opportunistic basis than their base-case scores, reflecting their strong structural demand in a near-term supply-challenged environment. Jacksonville and Charleston hold consistent positions across both axes - the most strategy-agnostic opportunities in the Tier 1 group.

For LV Collective, the takeaway is straightforward: Jacksonville and Charleston offer the strongest risk-adjusted profiles for ground-up development in the base case. Austin and Orlando are better framed as opportunistic plays in the near term. The upper-right cluster is where conviction is highest across strategy types.

04

Market Narratives

21 Austin, TX - Market Outlook & Strategy

What the data means for developers, investors, lenders, and deal archetypes.

23 Jacksonville, FL - Market Outlook & Strategy

What the data means for developers, investors, lenders, and deal archetypes.

25 Charleston, SC - Market Outlook & Strategy

What the data means for developers, investors, lenders, and deal archetypes.

27 Boston, MA - Market Outlook & Strategy

What the data means for developers, investors, lenders, and deal archetypes.

Austin-Round Rock, TX

Drivers & Risks

Austin's real estate story is a mix of strong economic growth and ongoing supply challenges. The market ranks #1 among all markets evaluated on economic growth and sits in the bottom quartile on supply - not a contradiction, but the direct consequence of a market so economically compelling it has attracted more capital than it can immediately absorb. The demand base has not stopped growing.

Market Outlook & Strategy

Austin's tech scene continues to thrive, making it one of the leading growth areas in the country, anchored by a concentration of major employers, a young and highly educated workforce, and continued net in-migration from higher-cost coastal markets. The near-term picture is more complex: a heavy development pipeline has pressured occupancy and flattened rent growth across most submarkets, and concessions remain common as operators compete for absorption. While this softness is noticeable, it's also part of a natural cycle. Starts are slowing materially, and as deliveries taper through 2026, the demand base - which has not stopped growing - will begin to tighten the market again. For LV Collective, the priority is not to wait for recovery to be obvious. The opportunity is in securing advantaged sites at reset pricing now and timing delivery into the tightening window that the data projects from 2027 onward. The current environment may also create selective acquisition opportunities as lease-up pressure and elevated concessions impact short-term valuations across newer product.

Austin-Round Rock, TX

Qualitative analysis of priority markets - covering key drivers, risks, and strategic outlook. Full metric detail and percentile breakdowns available in the Appendix.

Market Snapshot

#1 ECONOMIC ENGINE

Best-in-class tech and professional services job growth; leads the 85 markets evaluated in economic score.

HEAVY NEAR-TERM PIPELINE

Elevated supply (#71 supply risk) has pressured occupancy and flattened rent growth across most submarkets.

CYCLE IS TURNING

Starts are declining materially; the demand base is still growing and will begin tightening the market from the bottom up.

ENTRY WINDOW OPEN

Reset land pricing and near-term softness create basis advantages for developers who can time delivery into the tightening window.

What This Means For...

DEVELOPERS

Secure advantaged sites at reset pricing now; underwrite conservative lease-up and 12-18 months of carry; prioritize submarkets with limited direct pipeline.

INVESTORS

Buy-the-dip thesis in a structurally sound market; returns are basis and ops driven, not rent-spike driven; 3-5 year hold horizon is the right frame.

LENDERS

Sponsor quality and pre-capitalized contingency; realistic rent assumptions and adequate carry reserves are the screening criteria.

DEAL ARCHETYPES

Urban mid-rise with strong amenity programming near employment corridors; suburban garden in infill locations with limited competing supply; efficiency-forward programs at mid-market price points.

FIVE-YEAR MARKET OUTLOOK

Austin's tech-driven growth will outlast the current supply cycle. By 2027, tightening vacancies and resumed rent growth will validate disciplined entries made in 2025-2026.

Jacksonville, FL

Drivers & Risks

Jacksonville's profile is defined by balance - strong demand, manageable supply, and favorable cost conditions. It lacks the headline economic dominance of Austin or the demographic extremes of Lakeland, but it scores consistently across every category. That consistency is the point: it is the least thesis-dependent Tier 1 market in the analysis, which makes it the most immediately actionable.

Market Outlook & Strategy

Jacksonville's multifamily market sits in a solid position relative to most of its Sunbelt peers: strong underlying demand, a supply pipeline that exists but is not extreme, and development costs that are among the most favorable in the Southeast. In-migration and household formation are broad-based, which reduces volatility risk relative to more economically narrow markets. The near-term window favors acquisitions of existing assets where lease-up is underway, while ground-up starts timed to deliver in 2027-2028 can benefit from lower vacancy as the current pipeline is absorbed. The feasibility story here is relatively clear: basis can be controlled, rents are achievable, and the demand base is still growing.

Jacksonville, FL

Qualitative analysis of priority markets - covering key drivers, risks, and strategic outlook. Full metric detail and percentile breakdowns available in the Appendix.

Market Snapshot

BROAD-BASED GROWTH

In-migration and household formation are diversified across industries, reducing single-employer volatility.

FAVORABLE SUPPLY BALANCE

#26 supply risk; pipeline is above average but well within absorption capacity given demand trajectory.

BEST-IN-CLASS FEASIBILITY

#4 in development feasibility; hard costs are among the most favorable in the Southeast.

NEAR-TERM ENTRY WINDOW

Current occupancy softness is absorption-driven, not structural; tightening expected as 2025-2026 deliveries push through.

What This Means For...

DEVELOPERS

Ground-up starts timed to deliver in 2026-2027 benefit from decreasing vacancy; still need to underwrite moderate concessions through initial lease-up.

INVESTORS

Strong near-term acquisition opportunity as lease-up assets trade at discounted pricing; ground-up build-to-core thesis also compelling given feasibility profile.

LENDERS

Experienced sponsors with conservative leverage and realistic absorption assumptions merit favor; market fundamentals support standard advance rates.

DEAL ARCHETYPES

Jacksonville supports multiple execution strategies, but the strongest for LV Collective likely center around differentiated infill multifamily and mixed-use environments in emerging lifestyle districts with strong population inflows.

FIVE-YEAR MARKET OUTLOOK

Jacksonville is positioned to outperform relative to peers through the back half of the decade. Tightening supply, continued in-migration, and expanding employment base support steady rent growth and strong occupancy from 2027 onward.

Charleston-North Charleston, SC

Drivers & Risks

Charleston's market profile is defined by consistency rather than peaks. Unlike markets that lead one or two categories and lag in others, Charleston posts above-average scores across most dimensions - top-15 in supply risk, top-10 in development feasibility, above-average in economic growth and demographics. The clearest risk in the data is affordability: rising home prices and a widening cost gap are beginning to constrain the renter pool at the upper end, meaning rent growth has a ceiling. The product implication is clear: design to the middle of the market rather than the top. LV's amenity-rich, design-forward approach can differentiate without requiring rents that the market ceiling won't support.

Market Outlook & Strategy

The steady in-migration combined with a diverse job market in areas like port logistics, aerospace and defense, and healthcare helps create a consistent rental demand. This demand is less prone to the ups and downs that often affect other major markets. The pipeline is manageable, costs are favorable, and near-term ground-up development is actionable without a significant timing bet.

Charleston-North Charleston, SC

Qualitative analysis of priority markets - covering key drivers, risks, and strategic outlook. Full metric detail and percentile breakdowns available in the Appendix.

Market Snapshot

CONSISTENCY OVER PEAKS

Charleston posts above-average scores across most categories - no single weakness defines the market.

BEST FEASIBILITY IN THE SOUTHEAST

#2 development feasibility in the universe; favorable absolute costs with moderate growth.

MANAGEABLE SUPPLY

Top-15 supply risk score; the pipeline is present but not overwhelming relative to the renter base.

STEADY DEMAND BASE

Port, aerospace/defense, healthcare, and tech employment diversification provides cycle resilience.

What This Means For...

DEVELOPERS

Prioritize differentiated programs; underwrite slower lease-up, modest rent growth, and concessions through delivery with contingency for carry.

INVESTORS

Favor core-plus and build-to-core theses with conservative exit cap assumptions; value is created via basis and operations, not rent spikes.

LENDERS

Sponsor quality, location, and pre-capitalized get priority; deals with realistic rents and 12-18 months of cushion merit proceeds.

DEAL ARCHETYPES

Walkable infill and lifestyle-oriented multifamily near employment align best with LV's design-forward platform. Charleston's combination of demand, manageable supply, and experiential urban areas supports differentiated projects.

FIVE-YEAR MARKET OUTLOOK

Fundamentals remain structurally sound through the decade. Supply-demand resets by 2027; tightening vacancy and limited new starts reaccelerate rent growth into the latter half of the decade.

Boston-Cambridge-Newton, MA-NH

Drivers & Risks

Boston's profile reflects a high-barrier, institutionally dominant market - elite on income, homeownership pressure, and economic fundamentals, with near-term supply pressure concentrated in specific urban submarkets rather than spread metro-wide. One key factor to keep an eye on is the upcoming rent control ballot initiative in 2026. New construction carries a 10-year exemption - the ground-up thesis is intact - but warrants active monitoring from an acquisitions perspective.

Market Outlook & Strategy

Boston represents a strategic acquisitions market rather than a near-term ground-up development market for LV Collective. The opportunity is driven by temporary pricing dislocation within one of the country's most supply-constrained and institutionally durable multifamily markets.

Included at LV Collective's request as a near-term acquisitions market. Full metric detail and percentile breakdowns available in the Appendix.

Boston-Cambridge-Newton, MA-NH

Qualitative analysis of priority markets - covering key drivers, risks, and strategic outlook. Full metric detail and percentile breakdowns available in the Appendix.

Market Snapshot

HIGH-BARRIER COASTAL MARKET

Among the nation's most supply-constrained metros; limited development land and complex permitting keep inventory growth well below most comparable coastal markets.

OCCUPANCY REMAINS STRUCTURALLY TIGHT

Stabilized occupancy held at 96.2% in November 2025 despite elevated deliveries, reflecting the depth of Boston's underlying renter demand base.

PIPELINE IS PEAKING AND ROLLING OVER

After delivering roughly 8,100 units in 2024 and more than 9,300 in 2025, the market is expected to add around 7,700 units in 2026, with permitting pulling back - setting up tightening conditions from 2027 onward.

RENT GROWTH STEADY, NOT SPECTACULAR

The market is expected to record its third consecutive year of rent increases of approximately 2.5% in 2025, outperforming most peer coastal markets, but constrained by affordability at the top end.

POLICY RISK REQUIRES MONITORING

A statewide ballot initiative scheduled for November 2026 proposes capping annual rent increases, though newly constructed buildings would be exempt from the cap for 10 years from the date of completion - a meaningful carveout for ground-up development.

What This Means For...

DEVELOPERS

Time delivery to 2027+ to benefit from pipeline rollover; target transit-oriented suburban nodes where feasibility is strongest.

INVESTORS

Rewards patient capital and long hold periods over rent-spike strategies; thin entry yields supported by structural supply constraint and institutional-grade demand depth.

LENDERS

Among the most creditworthy multifamily markets in the country; experienced sponsors with realistic absorption assumptions and adequate carry merit favorable treatment.

DEAL ARCHETYPES

Institutional-quality acquisitions in transit-oriented submarkets with durable renter demand, strong educational and employment anchors, and long-term supply constraints represent the clearest fit for LV Collective's platform.

FIVE-YEAR MARKET OUTLOOK

Supply peaks and rolls off sharply from 2027, setting up a tightening vacancy cycle and resumed rent growth. Ground-up new construction is exempt from the proposed 2026 rent control measure for 10 years - the thesis is intact regardless of outcome, but the broader policy environment warrants active monitoring.

05

Recommended Path Forward

30 Stage 1 - Market Confirmation

Finalizing LV Collective's target market(s) using this report's framework as the foundation.

31 Stage 2 - Submarket Strategy

Identifying the highest-opportunity submarkets within the chosen metro(s).

32 Stage 3 - Site Sourcing

Defining the buy-box and identifying target development sites.

33 Stage 4 - Site-Level Market Analysis

Evaluating localized demand, competitive inventory, and rent positioning.

34 Stage 5 - Underwriting & Feasibility

Building the financial model and validating assumptions for capital deployment.

Next Steps

This report has set the analytical foundation. The next step is a single conversation to align on which markets match LV Collective's strategy and what the decision criteria are for moving forward. That conversation typically takes 30-60 minutes and produces a clear market priority list that guides everything that follows.

Site
Sourcing

04
Site-Level
Market Analysis

05
Underwriting &
Feasibility

OBJECTIVES

Confirm LV Collective's target market(s) for near-term multifamily development based on the findings of this report.

TACTICS

- Review composite rankings and category-level scores against LV Collective's investment criteria and risk tolerance.
- Align on a primary target market and one to two secondary markets.
- Define the minimum return thresholds, preferred unit mix, and product type that will guide site sourcing.
- Establish a documented investment thesis for each selected market.

Next Steps

Market selection tells you which city. Submarket strategy tells you which neighborhoods. The difference between a well-positioned site and a poorly-positioned one in the same metro can be a full turn of yield-on-cost. This step prevents that mistake before capital is committed.

01	02	03	04	05
Market Confirmation	Submarket Strategy	Site Sourcing	Site-Level Market Analysis	Underwriting & Feasibility

OBJECTIVES

Identify the highest-opportunity submarkets within the confirmed target market(s).

TACTICS

- Score and rank submarkets within each target metro using a comparable z-score framework applied to submarket-level data.
- Evaluate supply concentration, renter demand depth, rent positioning, and competitive inventory by submarket.
- Identify the two to three submarkets with the strongest alignment between demand fundamentals and development feasibility.
- Build a live database of multifamily and land sale comps within target submarkets.

Next Steps

With submarkets confirmed and a buy-box defined, site identification becomes a systematic process rather than a reactive one. This framework produces better deal flow faster.

OBJECTIVES

Identify and evaluate development sites within the target submarkets that align with LV Collective's investment criteria.

TACTICS

- Define LV Collective's site buy-box: location criteria, parcel size, zoning and entitlement profile, and target basis range.
- Use parcel data platforms to generate a screened list of sites within the buy-box parameters.
- Conduct preliminary deal screens on the shortlist to identify the highest-potential opportunities.
- Coordinate with local brokers and stakeholders to surface off-market opportunities.

Next Steps

The site-level market analysis is where macro conviction meets micro reality. It answers the questions that matter most before underwriting begins: Can this site achieve the rents the model needs? How long will lease-up take? What is the competitive set and how does this project differentiate?

01

02
Submarket
Strategy

03
Site
Sourcing

**04
Site-Level
Market Analysis**

05
Underwriting &
Feasibility

OBJECTIVES

Evaluate localized demand conditions and competitive positioning for priority development sites.

TACTICS

- Analyze renter demographics and demand depth at the site level.
- Evaluate competitive inventory, pipeline exposure, and rent positioning within the immediate trade area.
- Develop forward-looking supply and demand projections to stress-test absorption assumptions.
- Establish a baseline unit mix and rent schedule tied to actual market conditions.

Next Steps

This is where the analysis becomes a decision. The underwriting model brings together everything developed in the prior four stages into a single, defensible document that can support a capital commitment or a hard pass.

01 Market Confirmation	02 Submarket Strategy	03 Site Sourcing	04 Site-Level Market Analysis	05 Underwriting & Feasibility
------------------------------	-----------------------------	------------------------	-------------------------------------	-------------------------------------

OBJECTIVES

Build the financial model and validate assumptions for a capital deployment decision.

TACTICS

- Develop an institutional-grade financial model with detailed sources and uses, rents and expenses, and multiple return scenarios.
- Run sensitivity analysis across rents, costs, timing, and exit cap rates.
- Produce an Investment Committee memo with a formal recommendation - approve, approve with conditions, or decline.
- Prepare capital partner and lender materials for financing conversations.

INTERPRETATION

Scores based on z-score normalization across 85 USA MSAs. Higher score = more favorable relative positioning. Rankings updated Q1 2026.

Category & Metric Weight Rationale

The following category weights reflect the relative importance of each factor to ground-up multifamily development/acquisition outcomes.

Category	Weight	Rationale
Demographic & Household Growth	27.5%	The most durable predictor of long-term rental demand. Population growth, household formation, and in-migration are the inputs that drive everything else. Weighted most heavily because structural demographic tailwinds compound over time in ways that short-term market conditions cannot offset.
Supply & Pipeline Risk	22.5%	The most consequential near-term variable for development feasibility. A market with strong demand can still produce poor outcomes if the pipeline overwhelms absorption. Weighted second-heaviest to reflect the direct impact on lease-up timing, rent achievement, and exit timing.
Economic Growth & Labor Market	20.0%	Job creation drives household formation and income growth, which in turn supports rent levels and occupancy. Weighted heavily because economic diversification and growth trajectory are the most reliable indicators of a market's ability to sustain demand across cycles.
Rent & Occupancy Performance	12.5%	Current rent and occupancy data reflects where markets stand in the cycle today. Useful as a near-term performance indicator and for validating demand depth, but weighted lower than structural inputs because current conditions can diverge from long-term trends during supply cycles.
Homeownership & Rent Pressure	7.5%	The cost gap between owning and renting is a reliable driver of sustained rentership demand. Weighted moderately because it is most useful as a leading indicator in markets where affordability is shifting, rather than as a standalone factor.
Income Strength & Affordability	5.0%	Household income levels define the rent ceiling in any market. Weighted lower because rent achievability is already captured in the rent and occupancy category, and because income data tends to change more slowly than other inputs.
Development Feasibility & Cost	5.0%	Hard cost conditions determine whether a well-positioned market can actually pencil. Weighted lowest because hard costs are project-specific and highly dependent on submarket, product type, and procurement strategy - factors better addressed at the deal level than the market level.

Demographic & Household Growth Market Rankings

27.5% of Composite Score - 10 Metrics Evaluated - Ranked by Composite Z-Score.

Demographic momentum is the heaviest factor of composite scores because multifamily demand starts with people moving in and choosing to rent. Lakeland leads the evaluated MSAs in net in-migration; Austin and Raleigh follow on high-income household formation. The key risk across most Tier 1 markets is rentership rate - strong population growth doesn't automatically translate to renters where for-sale affordability remains accessible.

Supply & Pipeline Risk Market Rankings

22.5% of Composite Score - 11 Metrics Evaluated - Ranked by Composite Z-Score.

Supply positioning is the most consequential near-term variable for development feasibility. The differences here are noticeable: Pensacola ranks first while Austin and Raleigh sit in the bottom quartile due to inflated pipelines. For markets like Austin and Orlando, the challenges are significant but seem to be part of a natural cycle - starts are slowing and demand continues to grow. So, the key question isn't really about whether to enter these markets; it's more about figuring out the right timing and strategy for doing so.

Economic Growth & Labor Market Market Rankings

20% of Composite Score - 12 Metrics Evaluated - Ranked by Composite Z-Score.

The strength of the labor market is a key indicator of long-term rent growth and occupancy. Austin leads the 85 markets evaluated, anchored by tech and professional services job creation. The pattern across Tier 1 markets is basically: the strongest economic performers also carry the heaviest pipelines. While strong economic performance can justify taking on some risk in the short term - but only with conservative lease-up assumptions and sufficient carry.

Rent & Occupancy Performance Market Rankings

12.5% of Composite Score - 12 Metrics Evaluated - Ranked by Composite Z-Score.

The current rent and occupancy figures really reflect where we are in the market cycle rather than a long-term trend. Several of the highest-ranked markets overall - Austin, Orlando, Nashville - show near-term weakness because elevated deliveries have pressured occupancy. Weak current rents in a high-growth market with a slowing pipeline often signal an entry point, not a red flag.

Homeownership & Rent Pressure Market Rankings

7.5% of Composite Score - 6 Metrics Evaluated - Ranked by Composite Z-Score.

The gap between owning and renting costs is one of the most reliable drivers of sustained rentership demand. Boise leads Tier 1 markets on projected home price growth and a favorable mortgage-to-rent ratio. Markets with the weakest scores - Lakeland, Greenville, Charleston - have lower absolute home prices, so the for-sale market is more accessible and product must compete more directly with entry-level ownership.

Income Strength & Affordability Market Rankings

5% of Composite Score - 3 Metrics Evaluated - Ranked by Composite Z-Score.

Income levels play a crucial role in setting rent ceilings. Weighted lower not because it's unimportant, but because rent achievability is already included in the rent and occupancy category - markets where rents consistently outpace incomes show it in their absorption data. For growth markets like Austin and Jacksonville, it's more about the direction of income growth - wages are increasing, and renters are moving into higher-end spaces.

Development Feasibility & Cost Market Rankings

5% of Composite Score - 3 Metrics Evaluated - Ranked by Composite Z-Score.

Hard cost conditions determine whether a well-positioned market can pencil. Charleston leads Tier 1 with the second-best feasibility score among all markets evaluated, thanks to its favorable absolute costs and moderate growth in expenses. On the other hand, Austin has higher-than-average costs, highlighting the need to be disciplined across all Tier 1 markets.
