EXECUTIVE SUMMARY

Armistead Franklin, TN - 1740 New Hwy 96 W, Franklin, TN 37064

Ha Ha Development

Overview & Market Positioning

Armistead represents a large-scale, farm-forward mixed-use community planned on approximately 192 acres on the west side of Franklin, Tennessee. The concept centers around an integrated working farm, meaningful open space, and a walkable village center that anchors residential life. Unlike conventional suburban subdivisions or strip retail centers, the project is designed to create a lifestyle-oriented environment built around agriculture, community interaction, and curated commercial uses.

From a market perspective, the concept aligns with a broader national shift toward experiential, identity-driven communities. Residential demand today increasingly favors walkability, authenticity, and integrated amenities over purely functional suburban layouts. The agrihood model responds directly to this preference by blending housing with visible food production, locally oriented retail, and open space programming.

The commercial component, projected at approximately 90,000 square feet at full buildout (with roughly 25,000 square feet in the initial phase), is intended to support the residential environment through neighborhood-serving and experience-driven uses. Rather than functioning as a regional retail draw, the village center reinforces the community's identity and enhances residential appeal.

Regional Market Context

Franklin and Williamson County remain among the most economically resilient and demographically attractive submarkets within Middle Tennessee. The area is characterized by high median household incomes, strong public schools, sustained in-migration, and a reputation for quality of life. These fundamentals have supported consistent housing demand across ownership and rental segments.

The broader Nashville metropolitan area continues to benefit from population growth and employment expansion, though the multifamily sector is currently experiencing a period of normalization following the accelerated rent growth and absorption seen during 2021 and 2022. Supply deliveries across the region have increased, leading to more moderate rent growth and a more competitive leasing environment in the near term. However, long-term fundamentals remain constructive, supported by migration trends and economic diversity.

Within this context, Franklin's west side is viewed as a premium residential corridor. Large-scale, thoughtfully designed master-planned communities are increasingly rare due to limited remaining entitled land in prime locations. This constraint enhances the strategic value of well-positioned development sites.

EXECUTIVE SUMMARY

Armistead Franklin, TN - 1740 New Hwy 96 W, Franklin, TN 37064

Ha Ha Development

Demand Drivers & Target Demographics

The projected customer base for the development spans multiple life stages, including move-up buyers, young families, empty nesters, and renters seeking a higher-quality suburban alternative. This broad appeal reflects a common denominator: households with the financial capacity and lifestyle preference for community-oriented environments.

Demographic data in the surrounding trade area reflects strong household incomes and education levels consistent with demand for premium residential product. These households are not solely price-sensitive; they are increasingly amenity- and experience-driven. The integration of a working farm, curated retail, and pedestrian-scale design differentiates the community from conventional subdivisions and traditional apartment complexes.

Importantly, while demand fundamentals are supportive, the current market environment rewards product that is clearly differentiated. Commodity suburban multifamily product faces more direct competition due to recent supply growth. By contrast, communities that offer a unique identity and tangible lifestyle benefits have demonstrated stronger performance resilience.

Competitive Landscape

The competitive environment for multifamily and mixed-use development in the broader Nashville region is active but varied. Much of the recent multifamily supply has concentrated in urban core locations and traditional suburban garden-style formats. Few projects in the immediate Franklin area offer a true integrated agrihood model at scale.

Armistead's primary competitive set is therefore not defined purely by geography but by positioning. It competes less with high-density urban towers and more with high-quality master-planned communities and boutique lifestyle developments. Its differentiation lies in the authenticity of its agricultural integration and the intentional design of its village center.

This positioning offers a strategic advantage but also requires consistency in execution. Market perception will depend on whether the agricultural and village components function as meaningful community anchors rather than symbolic design features.

Commercial & Placemaking Strategy

The planned commercial program is intentionally curated. Uses such as neighborhood-serving retail, food and beverage establishments, boutique shops, daycare, and experiential tenants are designed to support daily life within the community rather than draw high volumes of external traffic. This reinforces the walkable, village-scale character of the development.

EXECUTIVE SUMMARY

Armistead Franklin, TN - 1740 New Hwy 96 W, Franklin, TN 37064

Ha Ha Development

Commercial & Placemaking Strategy (Cont.)

From a market standpoint, smaller-scale, curated commercial environments have demonstrated increased consumer interest, particularly when aligned with residential density and community programming. However, retail leasing conditions regionally remain selective. Tenants are prioritizing high-visibility locations with clear demographic alignment. The success of the commercial component will depend on thoughtful tenant mix and alignment with the target resident profile.

The initial 25,000-square-foot phase is critical in establishing early momentum and community identity. The market will evaluate the project's authenticity and long-term viability based on the quality and cohesiveness of this first delivery.

Key Market Insights

Several overarching themes emerge from the market analysis:

1. Strong Structural Demand:

Franklin's economic and demographic profile provides a stable base of residential demand. The area's income levels and household growth support premium housing concepts.

2. Cycle Normalization:

While long-term fundamentals remain positive, the multifamily sector is operating in a more balanced environment compared to peak-cycle conditions. Growth is moderating, and competition has increased.

3. Differentiation Matters:

Projects with clear identity and lifestyle orientation are better positioned to stand out in a competitive supply environment. The agrihood concept directly responds to evolving consumer preferences.

4. Execution Drives Perception:

The market will respond favorably if the farm-forward concept is visibly authentic and operationally integrated. Partial implementation could weaken the competitive advantage.

Forward-Looking Perspective

Looking ahead, Armistead Franklin occupies a strategic position within one of Middle Tennessee's strongest residential corridors. Its scale and master-planned approach allow it to shape a distinct identity within the Franklin market.

EXECUTIVE SUMMARY

Armistead Franklin, TN - 1740 New Hwy 96 W, Franklin, TN 37064

Ha Ha Development

Forward-Looking Perspective (Cont.)

The broader Nashville region is transitioning from a high-growth surge to a more normalized expansion phase. In this environment, long-term value creation is increasingly tied to quality, differentiation, and placemaking rather than simply capturing macro growth trends.

If delivered cohesively, the project has the potential to establish itself as a benchmark for lifestyle-oriented suburban development in the region. Its success will likely depend less on short-term market fluctuations and more on sustained community activation, brand credibility, and consistent execution over multiple phases.

Conclusion

Armistead Franklin aligns with both local market strength and broader national residential trends favoring experience-driven, walkable communities. Franklin's demographic and economic profile supports the underlying residential thesis, and the project's agrihood model offers meaningful differentiation within the competitive landscape.

The market fundamentals are supportive but not without normalization pressures. In this environment, the project's distinct identity and execution quality will ultimately determine its performance trajectory.

As positioned, the development represents a strategically thoughtful response to evolving residential demand in a fundamentally strong submarket.

Over \$200K	32%	15%	14%
% HHs Income Over \$100K	66%	45%	42%

The Competitive Market Area (CMA) materially outperforms the Nashville MSA and the U.S. on income depth and household growth, supporting higher-quality multifamily demand but also implying greater sensitivity to pricing, execution, and affordability thresholds.

The CMA exhibits a notably affluent and expanding household base, with a median household income of approximately \$137K—roughly 53% above the Nashville MSA—and nearly two-thirds of households earning over \$100K. Household growth is also strong, exceeding both the MSA and national benchmarks, indicating durable demand fundamentals tied to income-qualified renters rather than purely population-driven growth. However, income growth over the next five years is more skewed toward higher-income households, suggesting that demand will concentrate at the upper end of the rent spectrum while mid- and lower-income renter growth lags. For multifamily development, this supports higher rents, premium unit mixes, and amenity-driven positioning, but places greater emphasis on accurate rent ceiling assumptions, product differentiation, and downside protection if affordability constraints or economic softening reduce renter willingness to pay.

Ownership ('25)

% Own	73%	65%	64%
% of Nashville, TN MSA	7.3%	--	--

The Competitive Market Area (CMA) has a significantly lower population-weighted renter rate and an older demographic profile than broader benchmarks, indicating a more established, ownership-oriented market with concentrated renter demand in larger apartment buildings.

The CMA's renter rate (27%) is well below the Nashville MSA (35%) and U.S. (36%), while ownership rates are correspondingly higher. This suggests a market where new multifamily demand is less driven by broad population trends and more by specific, targeted renter cohorts. Notably, the share of renters living in larger apartment buildings (5+ units) is significantly higher than benchmarks, indicating that the existing renter pool is already concentrated in institutional-quality product.

Renter demand in the CMA is disproportionately concentrated among higher-income and middle-aged households, creating a clear target demographic but also indicating a competitive focus on a specific, valuable segment of the market.

While the CMA has a lower overall renter rate, its existing renter pool is notably affluent, with nearly half (49%) of all renter households earning over \$100K. Furthermore, 50% of renters are householders aged 25-44, confirming this as the core demographic. However, renter capture rates within the highest income bracket (>\$150K) are low (13%), suggesting potential headroom for premium product but also a strong ownership preference among the wealthiest.

50+ Unit Attached		1%		0%		4%		0%

The CMA exhibits a very strong and deep culture of homeownership, especially among high-income and older households, which defines a clear ceiling for renter demand and underscores that multifamily demand is driven by specific lifestyle or transitional choices, not a lack of ownership opportunity.

Ownership rates in the CMA (73%) significantly outpace the Nashville MSA (65%), with extreme penetration among high-income households (80% of >\$100K earners own) and those aged 45-64 (81%). This indicates that the natural progression for successful, established residents in this market is to own, not rent. The large owner cohort, particularly in the prime earning ages, represents a permanent diversion of potential demand from the rental pool.

% Population Age 25-44	25%	24%	+1.9%	+1.7%	29%	29%	+1.9%	+1.4%

The CMA is projected to experience robust, above-average growth in affluent households, solidifying its high-income character, but with growth concentrated at the very top of the income spectrum and a stagnating core renter-age population.

Household and income growth are strong, with the share of households earning over \$200K projected to grow nearly 5% annually. However, the core renter demographic (population aged 25-44) is shrinking as a percentage of the total population and growing more slowly than households overall. This underscores a market where future demand will be increasingly driven by premium product for high earners, while broader, middle-income renter growth lags.

Over 30%		4%		14%	812	+421%		3%		10%	8,202	+667%

Recent renter growth in the CMA has been overwhelmingly concentrated in high-income households, but this surge is accompanied by a sharp increase in the share of those renters spending over 30% of their income on housing, signaling growing affordability pressure even at the top of the market.

Economic Performance

Overall Employment

Nashville's employment trajectory reflects a market transitioning from an exceptional post-pandemic expansion phase into a more sustainable, late-cycle growth environment. Over the past decade, the Nashville MSA has significantly outperformed the national average, posting 2.9% annual job growth over the last 10 years compared to 1.3% nationally, reinforcing the market's long-standing position as a high-growth Sunbelt employment hub. Even on a shorter-term basis, 5-year historical growth of 2.3% remains more than double the U.S. average, underscoring the market's ability to attract and retain employers through multiple economic cycles.

Looking forward, Oxford Economics forecasts indicate a measured deceleration in employment growth, with Nashville expected to grow 1.3% in 2025 and average 0.9% annually over the next five years. While this represents a step down from recent highs, it remains modestly above the U.S. forecast (0.6% five-year average), suggesting continued relative outperformance rather than contraction. This normalization aligns with broader macro conditions, including tighter financial conditions, slower corporate expansion, and a maturing labor market, rather than market-specific weakness.

From a development and investment perspective, this outlook supports a more disciplined underwriting posture. Employment growth is expected to remain positive and supportive of household formation, but not at levels that will quickly absorb excess supply. The data reinforces the case for Nashville as a long-term allocation market, while highlighting the importance of timing, submarket selection, and basis discipline in the current cycle.

In summary, Nashville's employment fundamentals remain a competitive advantage versus peer and national benchmarks. While near-term growth is moderating, the market continues to demonstrate durable economic momentum that supports multifamily investment.

Employment Industry Composition

Nashville's employment base is diversified and skewed toward high-wage, white-collar sectors, providing durable demand drivers for multifamily housing despite broader economic normalization.

Nashville's employment composition reflects a well-balanced and increasingly resilient economic base, anchored by professional, financial, and healthcare sectors that tend to generate stable, higher-income households. Finance, Real Estate, Professional & Management Services represent approximately 44% of total employment, making it the dominant employment driver in the MSA and a critical source of renter demand for Class A and well-located Class B multifamily product. This concentration materially exceeds traditional Sunbelt peers that rely more heavily on cyclical or lower-wage employment categories.

Healthcare is the second-largest employment sector at 18% of total jobs, reinforcing Nashville's reputation as a national healthcare hub. This sector provides counter-cyclical stability, long tenure employment, and consistent in-migration of skilled workers, all of which support sustained housing demand across cycles.

Retail Trade (15%) and Food Services (13%) form a meaningful but not dominant portion of the employment base. While these sectors are more sensitive to economic slowdowns, their scale in Nashville is balanced by stronger white-collar employment, limiting downside risk during periods of macroeconomic softening.

From a labor dynamics standpoint, the data suggests Nashville functions not only as a job center but also as a net importer of labor, with employment growth outpacing resident labor growth in several key sectors. This dynamic supports continued household formation and in-migration, particularly among young professionals and skilled workers, which is favorable for multifamily absorption over the medium to long term.

In the context of the broader economic outlook—characterized by moderating GDP growth, easing inflation, and a stabilizing interest rate environment—Nashville's employment mix positions the market defensively. While overall job growth is expected to normalize, the quality and diversity of employment should continue to support steady leasing velocity, mitigate

Employment Industry Shifts

Nashville’s employment growth over the past decade has been driven by high-wage professional and healthcare sectors, reinforcing a structural shift toward higher-quality, more resilient job growth that supports long-term multifamily demand.

Between 2010 and 2023, Nashville experienced a meaningful evolution in its employment base, with job growth increasingly concentrated in professional, financial, and healthcare sectors. Finance, Real Estate, Professional & Management Services emerged as the primary growth engine, expanding at approximately 5.6% annually and increasing its share of total employment by roughly 200 basis points. This shift signals a maturation of the local economy toward higher-paying, office-oriented employment that tends to support stronger household formation and rental affordability.

More consumer-oriented sectors—including Accommodation & Food Services and Retail Trade—continued to grow, but at more moderate rates relative to white-collar industries. While these sectors remain important components of the local economy, their slower growth and relatively stable employment share suggest Nashville’s expansion has been driven less by tourism and consumption alone and more by structural, knowledge-based industries. Manufacturing growth remained positive but modest, limiting exposure to industrial volatility and large-scale employment swings.

From a real estate investment perspective, these industry shifts materially strengthen the demand profile for multifamily housing. Growth in higher-wage professional and healthcare jobs supports rent resilience, deeper renter pools, and improved credit quality, particularly for Class A and well-located Class B assets.

In the context of a moderating macroeconomic outlook—characterized by slower GDP growth and normalized hiring—Nashville’s employment mix positions the market favorably. While headline job growth is expected to decelerate, the quality and composition of growth should continue to support steady absorption and long-term multifamily performance, especially in

Building Permits

Nashville's residential building permit activity reflects a market that has moved past its peak construction phase and is entering a period of normalization. Over the past five years, the Nashville MSA averaged approximately 26,300 residential permits annually, well above long-term historical norms and indicative of an aggressive supply response to post-pandemic demand and capital availability. Importantly, multifamily permits represented roughly 40% of total permitting activity over this period, highlighting the scale of apartment development delivered into the market.

Recent data, however, shows a clear deceleration in permitting volumes. After reaching cycle highs in 2021–2022, total residential permits declined meaningfully in 2023 and 2024, with 2025 projected to remain below peak levels based on year-to-date issuance. This pullback aligns with higher interest rates, tighter construction financing, elevated construction costs, and more conservative developer underwriting. The slowdown is not isolated to Nashville but mirrors broader national trends, suggesting cyclical normalization rather than market-specific weakness.

From a supply-side perspective, this reduction in permitting is a positive signal for multifamily fundamentals. While near-term deliveries remain elevated due to projects already under construction, the pipeline beyond the next 24–36 months is thinning, which should help restore balance between supply and demand.

At the micro-market level, permitting volumes have remained elevated relative to historical averages but have also begun to trend downward. Multifamily's share of permits in the micro-market has averaged over 50% in recent years, indicating targeted density and infill development.

In the context of a moderating employment growth outlook and stabilizing macroeconomic conditions, The market appears to be self-correcting, reducing the risk of prolonged oversupply while preserving long-term growth fundamentals.

Construction Hard Costs

Construction hard costs in the Nashville MSA have transitioned from a period of extreme volatility to a more normalized, but still elevated, escalation environment—shifting development risk from cost spikes to margin compression and timing discipline.

After the sharp pandemic-era run-up, hard cost escalation has stabilized into a low single-digit annual range that is broadly in line with state and national trends, signaling reduced volatility but little relief on absolute pricing. Nashville remains competitively positioned versus higher-cost peer metros, yet its cost index reflects a “new normal” baseline that is structurally higher than pre-2020 levels. When layered with elevated land pricing and normalized rent growth, even modest cost overruns can quickly impair returns, increasing the importance of tight scope control, efficient unit mix, and realistic yield thresholds.

The Competitive Market Area (CMA) remains small in absolute scale but benefits from disciplined supply relative to demand, creating a more balanced near-term multifamily outlook than the broader Nashville MSA despite recent volatility.

While the Nashville MSA has experienced outsized inventory growth and elevated deliveries over the past several years, the CMA has maintained comparatively limited new supply, resulting in steadier absorption dynamics. Employment growth at the MSA level continues to provide a supportive macro backdrop, but recent and projected absorption volatility underscores a more competitive leasing environment in the near term. Looking forward, the muted construction pipeline in the CMA reduces the risk of prolonged oversupply, positioning well-located and appropriately scaled projects to stabilize more efficiently as regional demand normalizes.

Employment growth alone has not reliably translated into rent growth in either the Nashville MSA or the Competitive Market Area (CMA), reinforcing that near-term rent performance is being driven more by supply dynamics and affordability limits than by job gains.

Despite steady employment expansion across the Nashville MSA, effective rent growth has been volatile and, at times, negative, highlighting a weak historical correlation between jobs and rents—particularly within the CMA. This disconnect reflects the outsized impact of recent supply deliveries and rising renter cost sensitivity, which have muted pricing power even as the labor market remains healthy. Looking forward, rent growth is projected to normalize at modest levels as supply pressures ease, but underwriting should remain conservative and avoid assuming automatic rent upside from employment growth alone.

As of Q4 2025, effective rents in the Nashville MSA are roughly 49% below the monthly cost of homeownership, marking one of the widest rent discounts on record. While rent growth has cooled following the post-pandemic surge, elevated home prices, higher mortgage rates, and rising ownership costs continue to delay renter move-outs and extend rental tenure. This dynamic supports sustained apartment demand, even in a slower

Source: Costar

CMA land trades at a clear premium relative to the Nashville MSA, driving higher all-in basis and raising required rents to achieve target yields.

This premium is justified by stronger income profiles and lower supply risk, but it reduces flexibility in underwriting and increases sensitivity to construction cost overruns or lease-up delays.

Recent land transactions indicate that CMA sites are clearing at materially higher \$/SF and \$/acre levels than comparable sites across the Nashville MSA, reflecting stronger income demographics, tighter supply, and higher perceived barriers to entry. While this pricing supports long-term value and exit liquidity, it places pressure on development feasibility and limits margin for underwriting error. The dispersion in CMA land pricing suggests buyers are underwriting long-term fundamentals rather than near-term rent growth, indicating confidence but also patience. Developers should assume longer hold periods and prioritize durable cash flow over short-term appreciation strategies.

SW Concluded Annual Rental Demand	363	665	6,046

Aggregate CMA Demand Capture

Annual CMA Rental Demand	665	11.0% Share of MSA
--------------------------	-----	--------------------

The CMA currently captures a disproportionate share of the MSA's high-income growth and commercial development but demonstrates average to below-average capture of current renters and future multifamily demand, indicating it is a supply-constrained, high-opportunity market with execution risk.

The CMA accounts for 9.3% of the MSA's high-income households and 21.5% of its future commercial pipeline, signaling strong economic fundamentals and job growth. However, it captures only 4.8% of existing MSA renters and is projected to capture just 9.6% of future MSA rental demand on average. This disconnect suggests the market has underbuilt multifamily relative to its economic strength, but also that capturing projected demand requires successfully converting high-income households into renters.

(1) Affordable Home Price assumes 6.25% annual mortgage rate, 30-year term, 20% down payment, 1.50% annual property tax rate, and 1.60% of home value to annual insurance & maintenance costs

(2) Effective existing HHs: Current household base or 5-year average if projected loss for income segment

(3) Demand derived from annual turnover of existing households multiplied by an obsolescence rate of 0.49% per year

(4) Effective New HHs: Future household growth net of any loss effect (e.g. in-migration, "splitting" (divorce, children moving out of house, etc.), and upward financial mobility (entering new income bracket))

(5) Includes all owner households that will look for a for-sale unit in a given year, includes both turnover of existing households as well as new household growth

(6) Net new demand for new for-sale units annually, i.e. the sum of demand from existing household turnover/obsolescence and new household growth

SW Concluded Annual For-Sale Demand	663	1,383	14,056

Aggregate CMA Demand Capture

Annual CMA For-Sale Demand	1,383	9.8% Share of MSA
----------------------------	-------	-------------------

The CMA captures a strong and proportional share of the MSA's for-sale housing demand, reflecting its established, high-ownership character and indicating that new multifamily supply primarily competes with homeownership, not just other apartments.

The CMA is projected to capture 9.8% of MSA for-sale demand, closely aligning with its share of high-income households (9.3%) and overall market capture averages. This confirms homeownership is the dominant and competitive housing choice for the area's affluent demographic. The strong for-sale demand underscores the significant alternative housing option that new rental product must overcome.

For-Sale Demand Shift to SFD Rental Demand	30	62	610

Total Single-Family Rental Demand From Renters

Total Annual SFD Rental Demand	152	234	2,558
Implied Cumulative 5-Year SFD Rental Demand ('25-'30)	762	1,170	12,788
Total Annual Residential Demand	1,053	2,104	20,665
SFD Rental Demand Share	14%	11%	12%

The demand for Single-Family Rental (SFR) units in the CMA represents a small (11%) and stable portion of overall residential demand, indicating a niche rather than a primary market driver for multifamily development.

SFD rental demand in the CMA is estimated at 217 units annually, accounting for only 11% of the area's total residential demand. This aligns closely with MSA and national averages, reflecting consistent but limited preference for detached rental housing. The data suggests that while there is a steady niche for SFRs, the overwhelming majority of rental demand continues to be for attached multifamily product.

(1) Annual projected for-sale demand among households earning \$75K to \$100K per year who can't afford to purchase a new home in the MSA, but can afford to rent in the MSA; These are would-be buyers added to the MSA renter pool

(2) "Transitional Renters" defined as relocating homeowners who rent temporarily while in the process of buying a new home

(3) Total number of income-qualified owner households (above \$75K annual income) moving within market area per year (American FactFinder (US Census)

(4) Income-qualified new owner households (above \$100K annual income)

(5) SW assumption based on observed historical macroeconomic market trends

(6) Trend towards rentership due to a number of factors, including shift in preference, lack of availability of down payment among income-qualified households, market undersupply of for-sale development, etc.

Source: Esri; U.S. Census (American Community Survey); SW

Supply vs. Demand Conclusion

Supply vs. Demand - Annual Summary

	Annual Competitive Market Area Projection					Cumulative 5-Year Total
	2026	2027	2028	2029	2030	
Future Supply (1)						
Projected Deliveries						
Under Construction	732	0	0	0	0	732
Other Projected Deliveries	0	565	910	320	74	1,869
Units In Lease-Up	238					238
Total Future Supply	970	565	910	320	74	2,839
Future Demand						
Household Growth Demand	607	665	665	665	665	3,267
Total Future Demand	607	665	665	665	665	3,267
Under / (Over) Supply	(364)	100	(245)	345	591	428

The Competitive Market Area (CMA) faces a near-term supply imbalance driven by front-loaded deliveries, but longer-term demand fundamentals are largely sufficient to absorb planned units—assuming disciplined phasing and realistic lease-up expectations.

Over the next five years, projected deliveries modestly exceed forecast household-driven demand, resulting in a cumulative undersupply/oversupply gap that is directionally manageable but unevenly distributed across years. The near-term risk is concentrated in 2026–2028, when deliveries spike well above the CMA’s historical absorption and lease-up run rates, creating short-term pressure on occupancy, concessions, and rent growth. However, a meaningful share of the pipeline remains approved, pending, or conceptual, introducing execution risk that is likely to naturally temper realized supply. When viewed alongside strong income demographics and renter retention trends, the market appears capable of rebalancing post-peak delivery—though not without interim friction.

(1) Future Supply reflects unit totals stabilized at 95%
Note: Forecasted rental residential demand based on several criteria including the MSA’s projected household growth, CMA’s fair share capture, propensity to rent versus own, recent housing additions, and share of income spent on housing. This forecast is projected through the current year then annualized for the purpose of this analysis.

Armistead Franklin - Recommendations

Positioning Rationale:

The subject site is best positioned as a phased, mixed-format rental community that leverages missing-middle and mixed-use typologies to capture demand that is currently underserved by the Competitive Market Area's predominantly conventional multifamily inventory. While the broader Franklin / Cool Springs market has demonstrated the ability to absorb new supply, recent lease-up performance and rent trends indicate increasing sensitivity to unit size, pricing, and product differentiation—particularly among large, undifferentiated Class A apartment communities.

Rather than competing directly with existing and planned podium and garden apartment developments, the recommended program intentionally re-segments renter demand across three complementary formats: big-house quadplexes, farm-style clustered multifamily, and town-center stacked flats over retail. This approach allows the project to appeal to a wider range of renter profiles—downsizers, young families, and lifestyle-oriented professionals—while reducing reliance on any single renter cohort or rent band.

Importantly, the program aligns with observed market behavior showing strong and durable demand for home-oriented rental product that offers greater privacy, space, and character than traditional apartments, while remaining more attainable than for-sale housing. By phasing delivery and sequencing lower-risk, missing-middle product ahead of higher-density mixed-use components, the development strategy mitigates near-term lease-up risk while preserving long-term value and rent durability consistent with a core+ hold profile. The subject site is best positioned as a farm-forward, village-scale rental community within a larger ±192-acre mixed-use agrihood, rather than as a conventional suburban multifamily or mixed-use development. The core value proposition is not density or amenity concentration, but authentic place-making anchored by real agricultural production, walkability, and a human-scaled town center. This positioning directly responds to growing renter demand for purpose-driven communities that offer daily-life engagement, authenticity, and connection to land—attributes largely absent from the existing competitive inventory in the Franklin / Cool Springs market. Importantly, the project's integration with a working farm, trail network, village retail, and future hospitality offering elevates the rental component from a standalone housing product to a supporting use within a broader living ecosystem. This supports long-term value creation consistent with a core+ hold strategy, while phasing allows the project to establish identity and demand before delivering higher-density, town-center-adjacent product.

Armistead Franklin - Recommendations

PROJECTED LEASE-UP PACE	RECOMMENDED AMENITIES & IN-UNIT SPECIFICATION	TARGET RENTER AUDIENCE	MARKETING INPUT
Lease-up assumptions are informed by active and recently stabilized communities within the Competitive Market Area, which are generally absorbing between 13 and 23 units per month, depending on product scale and differentiation. Larger, conventional apartment communities have tended toward the lower end of this range, while projects offering unique formats, strong placemaking, or niche appeal have demonstrated more consistent absorption with limited reliance on concessions. Underwritten lease-up assumptions are as follows: Big House Quadplexes: Approximately 15–18 units per month. Demand is supported by limited competition for larger, home-oriented rental units within a walkable, farm-integrated environment. Farm Compound Cluster Units: Approximately 16–18 units per month. These units represent the project’s broadest appeal and align with the strongest absorption bands observed in the comp data. Town Center Stacked Flats: Approximately 18–22 units per month. Proximity to retail, food & beverage, the farm store, and community programming is expected to support faster absorption relative to conventional apartment product.	The amenity strategy is intentionally designed to reinforce the agrihood narrative rather than replicate conventional suburban amenity packages. In this context, the farm, open space, trails, and village center function as primary amenities, reducing the need for excessive indoor or resort-style features. Recommended Community Amenities include: Direct integration with the working farm, orchards, and agricultural programming. Trail network connecting residential areas to the town center, farm store, and open space. Central green spaces and courtyards designed for informal gathering and seasonal events. Flexible indoor/outdoor spaces for education, tastings, and small community events. Limited fitness and wellness facilities oriented toward everyday use rather than destination-style amenities. Recommended In-Unit Specifications include: Nine-foot ceilings (minimum) Durable, natural-toned LVP flooring Quartz or solid-surface countertops Stainless steel appliances with clean, modern profiles Full-size washer and dryer Smart home features (locks, thermostats)	The rental program is designed to serve a broad but intentional renter base that aligns with the overall agrihood vision. Target renter profiles include: Empty nesters and move-down households seeking a lower-maintenance lifestyle without sacrificing space, community, or connection to Franklin Young families priced out of nearby for-sale housing but attracted to a village-scale environment with open space and programming Professionals and creatives drawn to walkability, food culture, and experience-driven living Longer-term renters who value place, community, and lifestyle over short-term flexibility These renters are typically less price-sensitive than conventional apartment renters and exhibit longer average tenancy, supporting rent stability and reduced turnover over time.	Marketing should position the rental offering as part of a living agricultural village, not as an apartment complex within a master plan. Messaging should emphasize authenticity, participation, and daily-life experience rather than amenities or unit features alone. Key marketing themes should include: Living within a real, working farm community Walkable access to food, retail, and gathering spaces A village-scale alternative to conventional suburban housing Seasonal programming, events, and agricultural connection Retail, hospitality, and residential messaging should be tightly coordinated to reinforce a single, cohesive identity. Phased marketing should highlight the evolution of the place over time—early residents become part of building the community, rather than simply occupying it.

Nashville's retail market is transitioning from a high-growth, high-delivery cycle into a more normalized phase, with moderating employment growth, slowing absorption, and limited near-term supply.

Retail employment growth accelerated sharply in 2022 (6.6%) before decelerating to 3.2% in 2023 and 0.9% in 2024, signaling a return to trend rather than continued expansionary momentum. Deliveries peaked during 2022–2023, aligning with strong absorption in those years, but 2024 absorption has softened meaningfully (46,000 SF in the MSA, negative in the competitive set), indicating demand is no longer outpacing supply to the same degree. Inventory growth remains modest relative to total market scale, and near-term projected deliveries appear limited, reducing oversupply risk.

Retail Supply vs. Demand - Annual Summary

	Annual Competitive Market Area Projection					Cumulative 5-Year Total
	Rem. 2026	2027	2028	2029	2030	
Future Supply						
Projected Deliveries						
Under Construction	22,443	95,000	0	0	0	117,443
Other Projected Deliveries	0	111,137	112,923	82,333	0	306,394
Total Future Supply	22,443	206,137	112,923	82,333	0	423,837
Future Demand						
Consumer Spending Opportunity Gap Demand Potential	161,595	177,123	177,123	177,123	177,123	870,087
Total Future Demand	161,595	177,123	177,123	177,123	177,123	870,087
Under / (Over) Supply	139,152	(29,014)	64,200	94,790	177,123	446,250

Retail supply in the competitive market area is front-loaded in 2027 but moderates meaningfully thereafter, and over a five-year horizon projected demand exceeds total new supply—supporting a generally balanced outlook with near-term lease-up risk concentrated in the 2027 delivery wave.

Total projected future supply through 2030 is approximately 424,000 SF, with over half of that concentrated in 2027 (~206,000 SF), creating a temporary oversupply of roughly 29,000 SF in that year. However, projected annual demand remains steady at approximately 177,000 SF per year, resulting in cumulative five-year demand of roughly 870,000 SF—more than double the forecasted supply. Historical non-COVID absorption (~229,000 SF annually) further supports the market's long-term ability to digest new space.
